

About fivestar*

With over 22 years of experience, fivestar* offers technology agnostic consulting, development, and implementation services to build tools and systems to your specific requirements with your end-users in mind.

fivestar* solutions:

- Centralize Workflows through user-centered design and a clear understanding of key workflow objectives and steps.
- Optimize Processes through business intelligence and configurable rules that shift complexity and manual work away from end-users.
- Enable Decision-Making through real-time data and comprehensive reporting tools that provide in-depth analysis and visual insights.

Our approach starts by learning about your organization, challenges, and goals. We then build a solution that is exactly right for you.

Document Workflow Management

The Document Workflow Management solution enables organizations to create, index, query, compile, and distribute organizational and/or regulated policies and procedures and apply changes in real-time as business conditions require.

Need

- An automated, on-demand, data-driven content management and publishing system providing current information which reduces labor and materials costs
- Allow for changes to organization or government policies to be applied to documentation at the organizational level.
- Content can be categorized based on the organization type, user role, geography and relevant business line

Solution

- Finds and assembles regulations into localized micro-volumes as digital documents and printable PDFs.
- Enables access, approval, and publishing of digital content in real-time using rich text editing capabilities and content review workflows.
- Allows content managers to import and link older regulations for historical integrity and publish specific content to other platforms like the corporate Intranet.

Outcomes

- Reduced search and assembly times from weeks to real time, reduced print output by 99% and eliminated shipping saving \$1M/year.
- Reduced review times from weeks to days and eliminated outdated information in the field.
